

# Project and test management systems. TestRail and Azure DevOps

## Assignment

Stefania Pruteanu

*1. In your opinion, what is the greatest benefit of using test management systems? Which of their features allow to achieve this benefit?*

A great benefit, taken from the Beet Sprout's homework, would be that TestRail displays a concise **Overview feature** of my Test Runs and Results, the GUI was very intuitive and easy to navigate and to work with.

After using another great benefit, which was the **structured** Test Case **view**, I could easily sort, better, the test cases for asos\_MARKETPLACE's website. Now I realize how chaotic my previous excel sheet was compared to this 😊

While I was writing a Test Case I discovered a huge benefit, of creating and sharing "**Shared steps**" between cases, so I would no longer repeat on writing similar steps for various cases.

I dug more into a webinar from TestRail's youtube channel and saw how you can customize a Test Case **structure (editing fields, adding/removing, etc.)** so I **configured** an 'Exploratory Session (Freestyle)' for some cases that have no specific guidance for tests..

I lastly played around with some **Export features** of my Test Suite and Test Cases. I created some excel files here to test how they would look as a 'written report'.

 asos\_MARKETPLACE exported Test Results &  asos\_MARKETPLACE exported Suite
